

Want to help researchers at the USDA
and University of California Riverside
stop mosquitoes from spreading?

Join the Invasive Mosquito Project!

An oviposition cup with germination paper attracts container mosquitoes to lay eggs.

Aedes mosquito eggs laid on the sides of oviposition cup.

The Invasive Mosquito Project (IMP) is a citizen science project aimed at monitoring invasive mosquito species. The IMP provides a do-it-yourself citizen science project that meets national education requirements while collecting real data and contributing to a national mosquito species distribution study.

Free educational tools are available through the IMP Website including: PowerPoint® presentations, lesson plans published in the National Science Teachers Association, and protocols for teachers and students.
